

What to export before the read-only window closes (~Nov 29, 2026)

Stocky shut down on Aug 31, 2026. Export access runs “at least 90 days” after that — with no exact end date announced. Export now; rebuild later at your pace.

Timeline

Date	What happened
Feb 2, 2026	Removed from the App Store — new installs disabled.
Aug 31, 2026	Stocky and its APIs shut down completely.
≈ Nov 29, 2026	Read-only export window expected to end (no exact date).

What you can still export

Report	Where in Stocky	What it's for
Purchase order report	Reports → Purchase orders	Supplier names, historical unit costs, receiving dates — the backbone of cost history.
SKU report (incl. Average Cost)	Reports → Products	A fallback cost source for any product missing a receipt.
Stocktakes & adjustments	Stocktakes / Reports	Reconstruct counts and starting quantities later.
Sales detail	Reports → Sales	Keeps your reorder rhythm intact while a new app backfills sales.

What Stocky can't export (plan 10 minutes to rebuild)

Missing	How to rebuild it
Supplier contacts & payment terms	From your own PO emails — or type them in once; they're remembered per supplier.
Exact partial-receipt quantities	Check shipments against a reconciliation report; it flags anything needing a manual touch.
Supplier notes & reminders	Worth rebuilding: MOQ, lead times, “call before ordering” — they never survived the export either.

Three steps — then bring it in

1 · Export the PO report

Reports → Purchase orders →
Download CSV

2 · Export the SKU report

Include the Average Cost column

3 · Open the converter

Drag files in — processed locally

Screenshot · PO report with the Download button highlighted

Screenshot · Products report with Average Cost visible

Screenshot · converter page with the three CSV outputs

Real column names (so you can identify your files)

PO list export: No. · Vendor/Supplier · Shipping Location · Archived · Invoice No. · Supplier Order No. · PO Date · Ordered · Expected · Paid · Paid On · Payment Due · Shipping Cost · Adjustments · Tax · Sub Total · Sub Total (received only) · Total Cost · Received · First Item Received · Last Item Received

PO line export: Purchase Order · Vendor/Supplier · Product · Variant · SKU · Barcode · Supplier Code · ASIN · Status · Received at · Retail Price · In Stock · Qty Ordered · Pack Size · Qty (packs) Ordered · Cost (base) · Total Cost (base) · Cost (supplier currency) · ...

Pitfall: in the purchase order export, the Ordered column is a **date**, not a quantity. Don't map it to quantity.

Open the free converter →

Runs entirely in your browser — no upload, no account.

100% local processing · your files never leave your device · verify in DevTools (no network requests).
